# App N SaaS Builder — Session Handoff

**Snapshot date:** 2026-02-22 **Session focus:** Billing v2 frontend + trial-lock cron + Shipped-this-week badge **Live production:** https://appnsaasbuilder.com **Preview (dev):** REACT_APP_BACKEND_URL from `/app/frontend/.env`

---

## 1. What shipped this session ✅

### A. Billing v2 — Frontend (backend was already tested 106/106 in iter_10)

- `/app/frontend/src/lib/billing.jsx` — new context:
- `BillingProvider` — fetches `/api/billing/plans` (public) + `/api/billing/subscription` (authed) on mount and on user change.
- `useBilling()` — returns `{subscription, plans, loading, refresh, isLocked, isTrial, trialDaysLeft}`.
- `guard(err, {onUpgrade})` — helper that detects HTTP 402 responses and triggers the UpgradeModal.
- `daysLeft(iso)` — util, clamped non-negative.
- `/app/frontend/src/pages/Pricing.jsx` — new `/pricing` page (public route). 4 cards:
- Solo Builder — $29 / 8 builds in progress
- Team — $49 / 32 builds (marked *Popular*)
- Agency — $149 / 200 builds
- White Label — Custom (Contact sales `mailto:sales@appnsaas.app`)
- Current plan shows a "Current" badge ( `data-testid="pricing-current-badge-{key}"` ) + disabled CTA.
- Trial banner shows days-left; expired banner surfaces for locked users.
- `/app/frontend/src/components/UpgradeModal.jsx` — modal shown on 402 from `POST /api/projects`. Lists 2–4 upgrade targets with per-plan Stripe checkout CTA + "See all plans" → /pricing.
- `/app/frontend/src/components/BillingCard.jsx` — completely rewritten for the tiered subscription shape:
- Trial state → trial days-left chip + "Choose your plan" CTA.
- Stripe-active state → plan name, renewal date, tracked/limit builds, "Manage subscription" (portal) + "Change plan" buttons.
- Locked state → "Trial ended" copy + "Choose your plan" CTA.
- `/app/frontend/src/pages/RepoPicker.jsx` — integrated UpgradeModal via `guard()`; legacy "Free plan limit reached" toast removed.
- `/app/frontend/src/App.js` — wired `BillingProvider` inside `AuthProvider`; added `/pricing` route; added `LockedGate` wrapper around every ProtectedRoute (dashboard, connect, repos, projects/:id, settings). Locked users are redirected to `/pricing` — reachable routes: `/pricing`, `/payment/success`, `/payment/cancel`.
- `/app/frontend/src/pages/PaymentSuccess.jsx` — updated copy ("You're on {plan_name}", not "You're on Pro"); refreshes billing on success.

- `/app/frontend/src/pages/Register.jsx` — copy updated: "Get a 7-day trial on Solo Builder. No credit card required."
- `/app/frontend/src/lib/api.js` — added `billingPlans()`, `billingSubscription()`, updated `billingCheckout(origin_url, plan_key)`.

### B. Trial-lock nightly cron

- `/app/backend/server.py` — new job `_job_lock_expired_trials` at 04:00 UTC:
- Finds users where `trial_ends_at < now` AND `locked_at` is empty AND they have no active/trialing Stripe subscription.
- Sets `locked_at = now_iso` on each. Idempotent — skips users who already have `locked_at`.
- The dynamic `_resolve_plan` still handles trial expiration in real time; `locked_at` is a bookkeeping mark for audits and cheaper queries.

### C. "Shipped this week" badge

- **Backend** `/api/activity/weekly` — new endpoint. Returns `{shipped_this_week, threshold: 3, window_days: 7}`.
- `next_steps.completed_at` — stamped when `done` toggles → true (first time), cleared on false. Preserved across manual scans (`_run_scan`) and nightly rescans (`_job_rescan_stale_projects`) via a `completed_at_map` keyed on step text.
- `/app/frontend/src/components/ShippedBadge.jsx` — new component. Emerald rocket chip on Dashboard header. Visible only when `shipped_this_week ≥ 3`, hidden otherwise. Copy: "Shipped this week — N steps · keep going".
- `/app/frontend/src/pages/Dashboard.jsx` — fetches `api.activityWeekly()` alongside `topMovers()`; renders `<ShippedBadge activity={activity} />` in the header actions row.

---

## 2. Testing status — all green

| Iteration | Scope | Backend | Frontend | Report |
|---|---|---|---|---|
| iter_10 | Billing v2 backend (PLANS, plans/, subscription/, checkout/, trial provisioning, gating 402s) | 106/106 | — | `/app/test_reports/iteration_10.json` |
| iter_11 | Billing v2 frontend + LockedGate + trial-lock cron | 117/117 | 100% flows | `/app/test_reports/iteration_11.json` |
| iter_12 | Shipped-this-week badge (endpoint + completed_at + badge visibility) | 7/7 new | 4/4 cases | `/app/test_reports/iteration_12.json` |

---

## 3. Open decision point (tomorrow's first task)

A Code Quality Analyzer report was received asking for fixes. **Recommendation: reject — same false-positive loop as previous session** (user's own prior directive: "Agreed — the analyzer findings are false positives, so let's stop this loop… move on to real features").

**Confirmed false positives:** - "Hardcoded secrets" in `Settings.jsx:28-33`, `ResetPassword.jsx:48,50`, `Register.jsx:35`, `Login.jsx:35` → all are UI validation strings like `"Password is required"`, `"Passwords do not match"`. **Zero credentials involved.** - "Missing hook deps `api, setUser`" → `api` is a static module import; `setUser` is a `useState` setter — both are stable references, correctly omitted per React docs. - "`is` vs `==`" in test files → 33 flagged instances almost certainly `assert x is None` (canonical PEP 8, the report itself concedes it's acceptable). - "Undefined variable" → no file/line given, unactionable.

**Options presented to user (awaiting decision):** - (a) Ignore all analyzer findings — matches prior explicit instruction. - (b) Fix just the array-index key in `Pricing.jsx` (cosmetic, ~2 min). - (c) Do one real P2 refactor from the legitimate backlog (see §4). - (d) Something else.

---

## 4. Backlog — real, legitimate work

### 🟡 P1

- **3-day trial-ending banner** in `AppShell.jsx` — surfaces when `trial_ends_at` is within 3 days, with "Choose your plan" button. Data already available via `useBilling().trialDaysLeft`.

### 🟢 P2 (real refactors — NOT analyzer noise)

- `server.py` **router split** — currently ~2,060 lines. Extract into `routers/auth.py`, `routers/billing.py`, `routers/projects.py`, `routers/next_steps.py`, `routers/activity.py`, `routers/digest.py`, `scheduler.py`.
- `ProjectDetail.jsx` **decomposition** — 352 lines. Extract sparkline chart, next-steps list, project header, meta cards into sub-components.
- **Extract** `_rebuild_next_steps_preserving_completion` **helper** — logic is duplicated verbatim between `_run_scan` (~L1140) and `_job_rescan_stale_projects` (~L1961). One helper.
- `usePaymentPolling` **custom hook** — extract polling loop from `PaymentSuccess.jsx` (currently ~115 lines).
- `useActivity` **shared hook + refresh()** — the ShippedBadge doesn't auto-update when a user toggles a step on ProjectDetail and returns to Dashboard (only refetches on mount).
- **Fix Stripe checkout metadata** `lookup_key` — still passes legacy `STRIPE_PRO_LOOKUP_KEY` env var; should use `plan['lookup_key']` for the selected plan.
- **Migrate FastAPI startup/shutdown → lifespan handlers** — the `@app.on_event(...)` decorator is deprecated in modern FastAPI.
- **Stale-scan reaper** — mark scans still `status=running` after 5 min as `error`.
- **Wrap** `resend.Emails.send` **in** `asyncio.wait_for(..., timeout=15)` — currently unbounded.
- **Remove vestigial env vars** — `STRIPE_PRO_LOOKUP_KEY`, `FREE_TIER_PROJECT_LIMIT` no longer referenced.

### 🔵 Deferred (needs user input)

- Private-repo scope upgrade flow (PF-1).
- Session list + per-device revoke in Settings.
- Verify a real Resend sending domain (user-side action — DNS records needed).
- i18n copy externalization (only if you decide to ship a second locale).

---

## 5. Environment & keys reminders

- **Stripe test keys**: already in `/app/backend/.env`. DO NOT ASK the user.
- **Emergent LLM key**: already in `/app/backend/.env`, used via `emergentintegrations` (Claude Haiku 4.5 for scoring).
- **GitHub OAuth**: user-provided, encrypted at rest with AES-256 Fernet.
- **Resend**: user-provided; sending domain not yet DNS-verified.
- **Preview URL**: read from `REACT_APP_BACKEND_URL` in `/app/frontend/.env`. Do not trust any older URL.
- **Production**: https://appnsaasbuilder.com — read-only from this session; changes must be redeployed by user.

TEST REPORTS
  /app/test_reports/iteration_11.json                      [Billing v2 frontend + LockedGate + cron]
  /app/test_reports/iteration_12.json                      [Shipped-this-week badge]
  /app/backend/tests/test_activity_weekly.py               [new — 7/7 pytest cases]
```

## 7. First action tomorrow

1. Read `/app/memory/PRD.md` and `/app/memory/test_credentials.md`.
2. Read this file (`/app/memory/SESSION_HANDOFF_2026-02-22.md`).
3. Ask user which option they chose for the pending analyzer decision (§3).
4. If (a) → move to P1 (3-day trial-ending banner). If (c) → confirm which P2 item they picked.
5. Do NOT re-run any analyzer or lint checks unsolicited.

---

*End of handoff.*
